1. Development Environment & Coding Tools

Visual Studio Code

- **Where I used it:** Across all my programming and project work
- **How I used it:** Used as my primary code editor for writing and managing programs, helping me organize files and work efficiently

GitHub

- **Where I used it:** All my projects and tasks
- **How I used it:** Used to upload, store, and manage my projects, helping me track progress and maintain files

Jupyter Notebook

- **Where I used it:** Machine learning experimentation
- **How I used it:** Used to test ML models step-by-step and organize work in a structured format before uploading to GitHub

Google Colab

- **Where I used it:** Machine learning projects
- **How I used it:** Used to run ML models, especially when more computational resources are required

Postman

- **Where I used it:** API workshop
- **How I used it:** Worked with GET, POST, and other request types and performed basic backend communication to understand API functionality

2. Web Frameworks

HTML, CSS, JavaScript

- **Where I used it:** Java micro project (Book App)
- **How I used it:** Developed the frontend using HTML for structure, CSS for styling, and JavaScript for basic user interactions

Streamlit

- **Where I used it:** Engineering-friendly chatbot
- **How I used it:** Deployed a chatbot that takes user input and provides responses related to lessons, exam help, and planning

3. AI / ML Frameworks

Scikit-learn

- **Where I used it:** Credit card fraud detection project
- **How I used it:** Used to train the model and work on the ML workflow for classification

OpenCV

- **Where I used it:** Image classification project
- **How I used it:** Used for preprocessing tasks such as resizing images and adjusting brightness before model input

YOLOv8

- **Where I used it:** Object detection project
- **How I used it:** Implemented to detect car parts in images

NumPy, Pandas, Matplotlib

- **Where I used it:** All ML projects
- **How I used it:** NumPy for numerical operations, Pandas for dataset handling, and Matplotlib for visualization

4. Agentic AI Tools

Zapier

- **Where I used it:** Initial exploration of automation
- **How I used it:** Used to understand trigger-action based workflows between applications

n8n

- **Where I used it:** Custom automation workflow
- **How I used it:** Built a workflow where user inputs are processed to generate custom messages

Chatling

- **Where I used it:** Chatbot development

- **How I used it:** Created chatbot flows using dropdown-based conversation structure

5. LLM Platforms

ChatGPT

- **Where I used it:** Across all projects and learning
- **How I used it:** Used for debugging, understanding concepts, improving implementation, and practicing prompt structuring

Google Gemini

- **Where I used it:** Learning and validation
- **How I used it:** Used to cross-check responses and compare explanations

6. AI Tools I Frequently Use

GitHub Copilot

- **Where I used it:** Inside Visual Studio Code
- **How I used it:** Used for coding assistance and debugging to speed up development

Notion AI

- **Where I used it:** Notes and task management
- **How I used it:** Used to organize notes, track habits, and manage tasks

Kaggle

- **Where I used it:** ML practice
- **How I used it:** Used to find datasets for working on ML problems

Google Colab

- **Where I used it:** ML projects
- **How I used it:** Used to run ML models and experiments

7. Cloud Platforms

GitHub

- **Where I used it:** Project hosting

- **How I used it:** Used to host and manage my projects as a portfolio

8. Databases

SQL (Basic)

- **Where I used it:** Book App project
- **How I used it:** Used for handling and managing data

CSV / File-based datasets

- **Where I used it:** ML projects
- **How I used it:** Used for storing and processing datasets
